

# Chapter 6. A Lotta Hot Air

The BTUs hop into metalican all at once and really heat things up.

My big fan like the one on the burner, now blows air on 120 ° Metalican.

13

The BTUs in metalican quickly jump out of Metalican, into the fan driven air.

Here we go again!

Meanwhile inside Home Sweet Home, Mr. Air was minding his own business at about 67 °, when he fell into the air return duct.

He was a little chilly at 67 ° that is, until Biggest Fan slid him across Metalican.

Now Mr. Air was warmed up by his new friends, the BTUs.

Mr. Air felt great with a temperature of 98.6 °.

He burst into the kitchen through the supply duct register.

Here I am!

14

He mixed in with his clean air friends who were happy to see him again.

Mr. Air shared his BTUs with his air head friends, until everybody was 70 °.
